It, too, did "what couldn't be done!"

Generations of filing experts had struggled with the problem and failed. Then suddenly, in 1912, the L. B. Automatic Index did "what couldn't be done!"

1. It reduces the number of alphabetical subdivisions in the file drawer by 90%. This simplifies filing and finding, that anyone can operate the L. B. Automatic Index after a ten minute demonstration.
2. It practically eliminates filing errors. An ingenious double check advises the operator instantly of error impending—before it is made.
3. It averages a time saving of 40% in the actual filing and finding of correspondence or records.

The L. B. Automatic Index has become to filing and indexing what the telephone is to communication, the motor truck to transportation. It is today the most widely used special system of indexing files and card records. The valuable records on millions of Government papers and cards are entrusted to the L. B. Automatic Index.

May we demonstrate right in your own office?

DISEASES FIGHTING
A LOSING BATTLE

Yellow Fever, Hookworm and Malaria About to Be Banished From Earth.

VIRGINIA COUNTY LEADS

There Fight on Parasites That Sapped Life of People Before Thirteen Years Ago.

"If persistent echoes of war disturb one's peace of mind it is a wholesome antidote to turn attention occasionally to another sort of world struggle, a beneficent war—the war against disease," says a bulletin from the Washington headquarters of the National Geographic Society, based on a communication to the society from William Joseph Shewalter.

"In all the stirring history of man's effort to make himself master of his environment, there is no more thrilling chapter than that which tells of the bitter battles he has waged for the conquest of contagion, and of the ground he has won in his struggle with his relentless and innumerable, though invisible, foes," says the bulletin.

Three announcements of almost unprecedented import to mankind are expected to be made at no distant date.

The first of these, chronologically, at least, will be that yellow fever has at last been banished from the face of the earth and that the germ which causes it has become extinct, along with the mosquito, the doer, the great bulk, and the carrier of the pest. The next in order will probably be that hookworm disease, which has been called the "handicap of poverty," an associate of crime and degeneracy, a destroyer of energy and vitality, a menace and an obstacle to all that makes for civilization, and which endemio in a zone that embraces half of the earth's population, can be driven from any community which has the will to get rid of it.

"Last will come the statement that large-scale demonstrations have proved that malaria can be eradicated from almost any community that has enough vital force left to push a thorough, though inexpensive, campaign for its extirpation.

Virginia Campaign Center. "Richmond county, Va., where the war on the hookworm as a world-wide fight had its inception, stands out as an example of what may be accomplished and that evidence that it can be accomplished with much less difficulty than was formerly supposed.

"When the work began there, about thirteen years ago, 32 per cent of the people had the disease. A few years later a re-survey showed that this had been reduced to 38 per cent. A more recent survey reduced it to 2 per cent, and in 1922 it was announced that there is not a single person in the entire county in whose body the worms are numerous enough to produce any of the symptoms of the malady.

"There are two kinds of hookworms that invade the human body, an old world species known as *Ancylostoma duodenale* and the 'new world' form known as *Necator americanus*.

The new world species of hookworm is a small parasitic creature about as thick as an ordinary pin and half an inch long. The adult female worm, inhabiting the small intestine, lays thousands of eggs daily. After these pass out of the body they hatch within one or two days and are a microscopic size when hatched and never grow larger as long as they remain in the ground.

"Then comes along a pair of bare feet or hands, or some other part of the body touches the infected ground, and the little villains make the most of their opportunity. They promptly begin to bore their way through the skin, causing a severe irritation known as 'ground itch.' Once under the skin, they travel through the tissues until they come to the lymphatic system and thence into the blood. Finally after passing through the heart and lungs they reach the throat and pass thence through the stomach, ultimately landing in the small intestine, to whose wall they fasten themselves, and for as much as seven years, if not disturbed by treatment, take their toll of the victim's blood and intestinal tissue.

Suck Away on Cells. "They develop in their salivary glands a substance that has a marked power of inhibiting coagulation of the blood. Attaching themselves to the surface of the intestinal wall, rasping and sucking away the delicate inner cells on which they feed, they lay bare the deeper tissues and the wound continues to bleed for a long time, even after the worm has deserted the spot to which it was attached.

"But they go even further than that. By some method not well understood, they take the blood to which they have access and convert it to a dregs of change, reducing the amount of hemoglobin—the element that makes us red-colored and which constitutes the ingredient that tends to render healthy blood an unfertile soil for the seeds of infection sown there through lack of sanitation. It has been found that in severe cases of hookworm infection as much as 90 per cent of the red coloring matter

of the blood is destroyed, and that the number of red corpuscles—the blood carriers of the human system—may be cut down 50 per cent. "Yet, owing to the fact that the every stage is so well known, that the methods of combating it are so dramatically effective, and that those who are cured so quickly begin to experience the joys of living once more, it makes itself the most readily and successfully used of all diseases with which to point a community toward a goal of better health."

KELLEY FIRM FOR \$6,000 FOR PERSONNEL OF NAVY

Subcommittee Chairman Sees No Reason to Increase Number Fixed by Law.

A prediction that the 1923 Navy budget will provide for an enlisted personnel of \$6,000, the total fixed by the present law, was made Saturday by Chairman Kelley of the House subcommittee which has the

SOME men never get to know the difference between a truck tire and a "special discount" until their truck is laid up while the "special discount" is being taken from the rim.

There is a complete line of Goodyear Truck Tires to suit every hauling condition—Good-year Cords, Smooth-Surfaced Solids, All-Weather Tread Solids, and Hollow-Center Cushions.

All get their white teeth in this new-day way

Careful people of some fifty nations now use a new way of teeth cleaning. To millions of women in every clime it is bringing prettier teeth.

Leading dentists, all the world over, are advising its adoption. It means better tooth protection.

Are you still clinging to old methods, when all about you you can see what this new method does?

You must fight film

Old ways of teeth cleaning proved disappointing. Teeth still discolored, still decayed; as most people know. Tooth troubles constantly increased until very few escaped.

Dental science found the reason in a film. In that viscous film you feel. It clings to teeth, enters crevices and stays. Food stains, etc., discolor it. Then it forms dingy coats. Tartar is based on film.

The ordinary tooth paste does not effectively combat it.

Now they combat it

Millions now combat that film. Dental research found two effective ways. One acts to curdle film, one to remove it. This is done daily and gently, without the use of harmful grit.

Able authorities proved these methods by many careful tests. Now leading dentists everywhere advise them.

A new-type tooth paste has been created,

based on modern research. The name is Pepsodent. These two great film combatants are now embodied in it for daily application.

A new dental era

Pepsodent brings other effects now found to be essential. Thus it is bringing to countless homes a new dental era.

It multiplies the starch digestant in the saliva. That is there to digest starch deposits which otherwise ferment and form acids.

It multiplies the alkalinity of the saliva. That is Nature's neutralizer for the acids which cause decay. The former tooth paste, which proved so ineffective, brought just opposite effects.

It polishes the teeth so film less easily adheres.

Thus Pepsodent combines the best that modern science offers to fight enemies of teeth.

Let Children Try It

Do not let your children suffer what you may have suffered from your teeth. Teach them this new-day method. Dentists advise that children use Pepsodent from the time the first tooth appears.

Watch the results on their teeth for a week and you'll realize why they need it.

Send the coupon for a 10-Day Tube. Note how clean the teeth feel after using. Mark the absence of the viscous film. See how teeth whiten as the film-coats disappear.

Then decide what is best for you and yours by what you see and feel. Cut out the coupon so you won't forget.

Thousands of Dollars
to business
Washington

The Baltimore and Ohio Railroad recently conducted through the great national publications, a special advertising campaign inviting vacationists to visit the Nation's Capital.

Thousands of letters were mailed out and representatives of our Passenger Traffic Department stationed throughout the United States bent every effort to sell the idea of "seeing Washington" to their communities.

The results were highly gratifying. Aside from the thousands of travelers who come into Washington over the Baltimore and Ohio week in and week out, we have recently brought an additional traceable ten thousand visitors, in special parties, who came in direct response to the Baltimore and Ohio advertising campaign.

The
Baltimore & Ohio
"America's First Railroad"
Established 1827

In one instance five special trains were required to bring one party of two thousand visitors. Other parties varying in size from a score to several hundred came from the North, East and West, totaling to date over ten thousand visitors, who remained in Washington on an average of three or more days, leaving several hundred thousand dollars in the hands of Washington business men.

The Baltimore and Ohio was Washington's first railroad and it is vitally interested in providing satisfactory transportation to and from the Nation's Capital.

We appreciate the patronage and support we have received from Washingtonians and it will always be our endeavor to merit it.
